SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
--	-----------	---------------

3 MONTHS      01/03/2007      PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

## Office Action Summary

Application No.

10/618,602

Applicant(s)

MATSUMOTO ET AL.

Examiner

Luz L. Alejandro

Art Unit

1763

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 12 October 2006.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-13, 15-25 is/are pending in the application.
- 4a) Of the above claim(s) 1-12, 18, 20 and 24 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 13, 15-17, 19, 21-23 and 25 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/12/06 has been entered.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 13, 16, 23, and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taguchi et al., U.S. Patent 6,469,448 in view of Baldwin, Jr. et al., U.S. Patent 6,280,563 and Totonani et al., U.S. Patent 6,181,069.

Taguchi et al. shows the invention substantially as claimed including a plasma processing apparatus for supplying radio-frequency power into a process chamber so as to generate plasma, to thereby treat an object to be processed with the plasma; wherein the process chamber has a top which is disposed opposite to the object to be processed through the medium of a region for generating the plasma; wherein a plurality of metal-based radio-frequency antennas 9 are disposed in the process chamber, wherein the process chamber has a chamber wall having at least one antenna so that the antenna penetrates the chamber wall into the inside of the process chamber (see figs. 5 and 12 and their descriptions).

Taguchi et al. does not expressly disclose where the top plate comprises a metal or silicon based material or wherein the antenna provides linear lines so that the direction of electric currents in adjacent antennas are the same, provided that a curved portion may be present in the linear line. Baldwin, Jr. et al. discloses a top plate 44 with a potential applied which is made of a metal (see fig. 1 and its description). In view of this disclosure, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the apparatus of Taguchi et al. so as to have the top plate composed of a metal because, as disclosed by Baldwin, Jr. et al., such a material is suitable for having RF potential applied.

With respect to the antennas, Totonani et al. discloses wherein the antenna provides linear lines (16,17) so that the direction of electric currents in adjacent antennas are the same (see fig. 13 and its description). In view of this disclosure, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the apparatus of Taguchi et al. modified by Baldwin, Jr. et al. so as to include the claimed antenna configuration as disclosed by Totonani et al. because using such an antenna arrangement effective plasma processing can be conducted within the apparatus.

Concerning claim 16, it would have been obvious to one of ordinary skill in the art at the time the invention was made to determine through routine experimentation the optimum length of the antenna based upon a variety of factors including the desired area of the plasma distribution and such limitation would not lend patentability to the instant application absent a showing of unexpected results.

Regarding claim 23, note that the apparatus as shown in Taguchi et al. includes a susceptor 6 for supporting the object to be processed in the process chamber, and a bias 7 is applicable to the susceptor.

Concerning claim 25, note that in the apparatus of Taguchi et al. modified by Baldwin, Jr. et al. and Totonani et al. the electric fields are capable of being strengthened by one another.

Claims 15 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taguchi et al., U.S. Patent 6,469,448 in view of Baldwin, Jr. et al., U.S. Patent

6,280,563 and Totonani et al., U.S. Patent 6,181,069 as applied to claims 13, 16, 23, and 25 above, and further in view of Glukhoy, US 2003/0168172.

Tagguchi et al., Baldwin, Jr. et al., and Totonani et al. are applied as above but do not expressly disclose that the antenna disposed in the process chamber is covered with an insulating material so that the radio-frequency antenna does not directly contact the plasma, and wherein an insulating fluid is circulated between the antenna and the insulating material. Glukhoy discloses that the antenna disposed in the process chamber is covered with an insulating material 64 so that the radio-frequency antenna does not directly contact the plasma, and wherein an insulating fluid is circulated between the antenna and the insulating material using tubes 82 (see paragraph 0035-0036). In view of this disclosure, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the apparatus of Taguchi et al. modified by Baldwin, Jr. et al. and Totonani et al. in order to cover the antenna with an insulating material and circulate an insulating fluid between the antenna and insulating material because such a structure will protect the antenna as well as control the temperature of the antenna to avoid damage.

Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Taguchi et al., U.S. Patent 6,469,448 in view of Baldwin, Jr. et al., U.S. Patent 6,280,563 and Totonani et al., U.S. Patent 6,181,069 as applied to claims 13, 16, 23, and 25 above, and further in view of Holland et al., U.S. Patent 5,975,013 or Takagi et al., US 2004/0020432.

Taguchi et al., Baldwin, Jr. et al., and Totonani et al. are applied as above but do not expressly disclose wherein the thickness or diameter of the radio frequency antenna disposed in the process chamber is changed along with the propagation direction of the radio frequency power. Holland et al. discloses varying the thickness or diameter of a radio frequency antenna (see fig. 11 and its description), as does Takagi et al. (see fig. 2 and its description). In view of these disclosures, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the apparatus of Taguchi et al. modified by Baldwin, Jr. et al. and Totonani et al. so as to vary the thickness and/or the diameter of the coil as claimed because in such a way a uniform plasma density can be achieved.

Claims 21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Taguchi et al., U.S. Patent 6,469,448 in view of Baldwin, Jr. et al., U.S. Patent 6,280,563 and Totonani et al., U.S. Patent 6,181,069 as applied to claims 13, 16, 23, and 25 above, and further in view of Grimbergen et al., U.S. Patent 6,390,019.

Taguchi et al., Baldwin, Jr. et al., and Totonani et al. are applied as above but do not expressly disclose wherein a measuring device is disposed in at least one position of the top plate so as to monitor the state of the generated plasma and the top plate has a plurality of apertures for passing a gas to be supplied to the processing chamber. Grimbergen et al. discloses a measuring device 25 which is disposed in the top of the chamber so as to monitor the state of the generated plasma (see fig. 1 and its description), and a top plate which has a plurality of apertures for passing a gas to be

supplied to the process chamber (see, for example, figs. 2 and 3a and their descriptions). In view of this disclosure, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the apparatus of Taguchi et al. modified by Baldwin, Jr. et al. and Totonani et al. so as to have the measuring device and apertures as suggested by Grimbergen et al. because having the measuring device and apertures in the top plate allows for accurate measurements and uniform distribution of the gas across the workpiece.

### ***Response to Arguments***

Applicant's arguments with respect to claims 13, 15-17, 19, 21-23, and 25 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

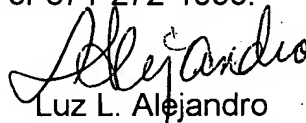

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Luz L. Alejandro whose telephone number is 571-272-1430. The examiner can normally be reached on Monday to Thursday from 7:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Parviz Hassanzadeh can be reached on 571-272-1435. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
